

$$n \text{ [rpm]} = \frac{V_c \text{ [m/min]} \times 1000}{\pi \times D_1 \text{ [mm]}}$$

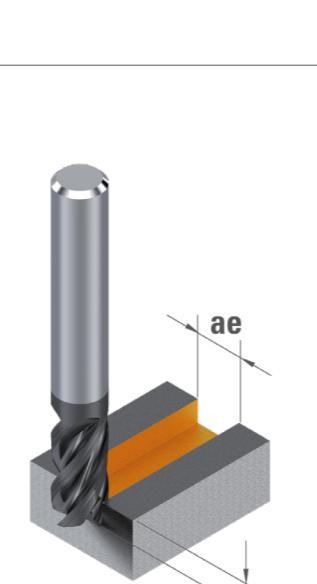

$$V_f \text{ [mm/min]} = n \text{ [rpm]} \times f_z \text{ [mm]} \times Z$$

## ROUTING

		VDI 3323	CARBIDE $V_c$ [m/min]	$a_e$ (mm)	$a_p$ (mm)

Values based on cutting oil use. The cutting parameters are very strongly influenced by external parameters, such as tool and workpiece stability, etc.  
The cutting conditions must be adapted to the operating conditions !
